

# Guardbook

Established and reliable online system for surveillance and security

Online security log

Fault management

Task management

Visitor management

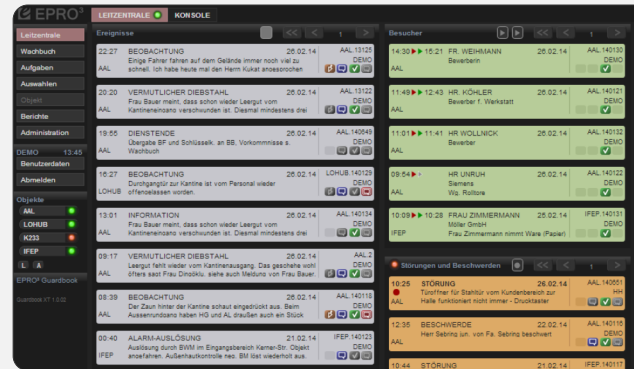

Action planning

Key book

District- and patrol duties

Monitoring access

Plus other features

## Clear Ticket System

The Guardbook presents itself as a ticket system. Events, visitor activity, technical faults and similar occurrences will be categorized and displayed inseparately colored sections to help keep the overview, while an individual alarm system notifies the user of new entries.

## Powerful Online Technology

EPRO³ Guardbook utilizes up-to-date SaaS technology (Software as a Service). No local installations, apps or special system requirements are necessary. Use any Internet-capable device, anytime and anywhere, to access.

## Practical Role Assignment

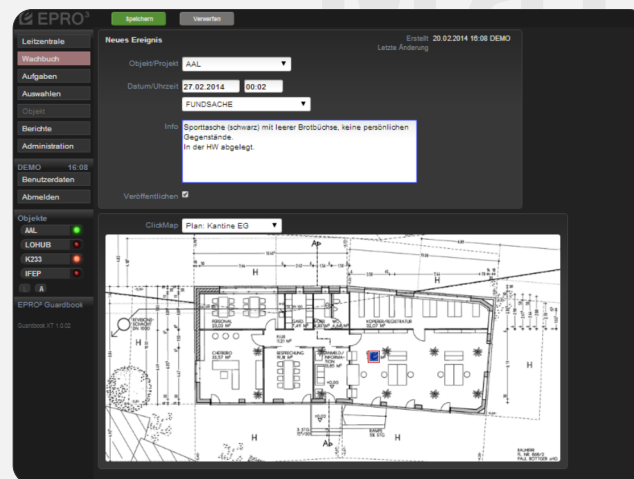

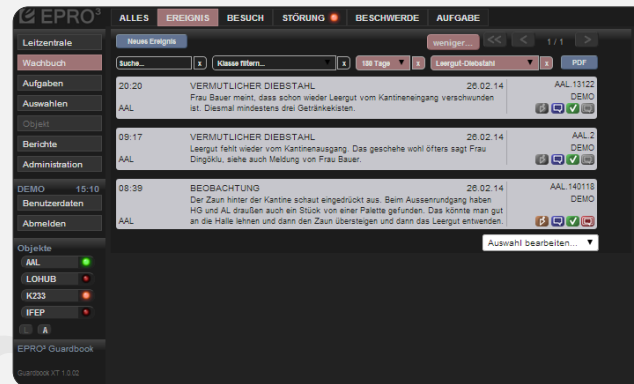

A convenient role assignment simplifies the granting of rights and provides each respective user with a personalized interface. For example user-role 'MON (monitor)' allows third parties (such as customers or employers) to enter the system to read along on certain tasks.

## Reliable Quality Control

Through a built-in editing system all entries can be set to undergo quality checks before they are disclosed to potential third parties.

## Wide Professional Application

EPRO³ Guardbook is used within industry, logistics and commerce, urban administration as well as by private and municipal security service providers.

You and your team can try  
EPRO<sup>3</sup> Guardbook  
for 6 weeks without commitment.

You administrate your system yourself  
and can therefore always customize  
EPRO<sup>3</sup> Guardbook to your assigned  
tasks.

As a specialized provider we take care  
of a smooth operation of your system  
and the security of your data.

256bit encryption, SSL/TLS, own  
servers and the storage in certified  
domestic data centers guarantees the  
highest possible security.
